RACORES DE LATÓN DE ROSCA CÓNICA CON PTFE

Metal Work puede suministrar racores con una rosca cónica recubierta de politetrafluoretileno. Este sistema proporciona el sello neumático entre el racor y la rosca hembra. Por lo tanto, no es necesario agregar otros sistemas de sellado durante el ensamblaje, como adhesivos o cinta de teflón. Esto reduce significativamente los tiempos de montaje. Las características físicas y técnicas del material utilizado aseguran que las propiedades se mantengan a lo largo del tiempo y en un amplio rango de temperaturas de funcionamiento. Este revestimiento se puede usar con racores automáticos tipo R1C, R31C, R32C y R39C que tienen una rosca cónica G1/8 a G1/2.

CLAVES DE CODIFICACIÓN

Los racores con rosca de PTFE tienen el mismo código que el RACOR estándar, con la adición del sufijo **T**.
Por ejemplo, el racor RL1C 8 3/8 tiene el código **2L01C11**, por lo que la versión de PTFE tiene el código **2L01C11T**.
